Hey Stu,

Good seeing you the other day.. we were down for an Exide bankruptcy meeting on Thursday and had a short meeting with Bill S. Friday morning. You know, we never finalized the MSD guidance document.. got hung up somewhere in higher levels of management, but there is an effort to revise the draft this year (shorter most likely) and get it out. Regarding the National VI guidance, you recall EPA took comments on both documents during the April – July time frame, over 1500 were submitted.. the drafts have now been revised and are undergoing OSWER review.. then off to OMB, so who knows how long that will take..

Hey Jennifer.. look forward to meeting you.

Rick

Rick,

I hope you are well. I was reminded (seeing you in the lobby) that I hadn't let you know that I moved over to our municipal solid waste group. You may know this already, but the new MSD contact in Remediation is Jennifer Thompson (who is much smarter and more personable than I and has a great deal of consulting experience). I haven't asked you in a while: Did your MSD guidance document make it through management review? Also, since I've already put you on the spot and am curious: What's the status of the vapor intrusion guidance? Y'all were taking comments when I last looked.
